

PATRIOT

BUILT TO MOVE WHAT MATTERS

Pump Packages from Patriot are designed, engineered, and built according to the highest quality standards. With flexibility of design in mind, units can be outfitted with leading manufacturers pump ends, diesel engines, electric motors & controls. Patriot base platforms are modular in design. This allows for various pump styles & sizes as well as engine or electric motor combinations to be mounted on multiple-sized fabricated skids.

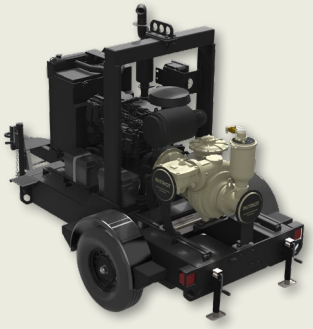

CONFIGURATIONS AVAILABLE:

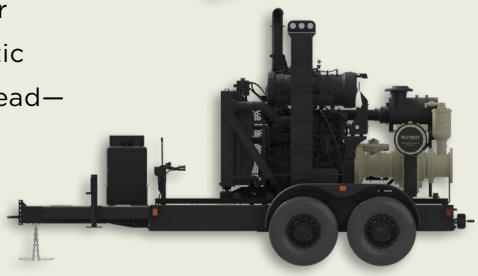

With many potential configuration combinations, Patriot Pump Packages has your application solution whether it calls for pumping clear liquids, solids handling, specialty chopper pumps, or slurry pumps requiring an exotic metallurgy; low head—low flow or high head—high flow and everything in between.

HYDRAULIC POWER UNITS:

Rugged, diesel-powered hydraulic power packages engineered for reliable down-hole pumping applications. Available in trailer or skid-mounted configurations, with integrated hydraulic pump, oil reservoir, filtration, and cooling systems for dependable field operation.

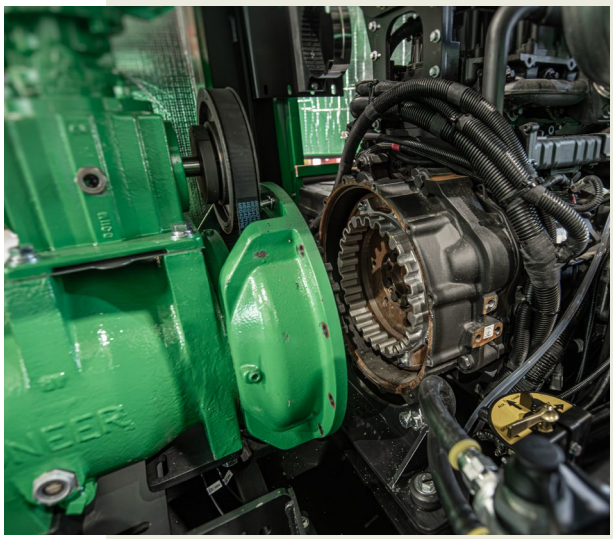

- DIESEL OR ELECTRIC DRIVEN
- SKID MOUNTED (STATIONARY OR DRAG)
- TRAILER MOUNTED (DOT OR SITE)
- OPEN OR ENCLOSED

QUICK PICK:

The Quick Pick hatch opens right on top of the unit for fast top-side access—inspect and reach key service points in seconds, without opening up the full enclosure.

QUICK RELEASE:

Inside the enclosure, the pump end rides on the Quick Release—a pull-out tray that gives your crew direct access to the pump-end connection for maintenance, without tearing the package down.

PATRIOT PRIMING SYSTEM:

The Patriot Priming System maintains prime through variable suction conditions, keeping transfer and bypass operations running unattended.

VACUUM PUMP FEATURING THE SPLIT ACTUATOR:

The 50 CFM Patriot Prime Vacuum Pump features the patented Patriot Split Actuator, which simplifies seal replacement and streamlines maintenance. Engineered for seamless compatibility, this design is interchangeable with products from all major manufacturers.

REMAN UNITS:

Remanufacturing takes a used package all the way back to field-ready condition—not a patch on a failure, but a full rebuild. The unit comes apart, every component is inspected against spec, worn parts are replaced, and the package is tested before it goes back to work.
